

Write a C program to implement Queue operations such as ENQUEUE, DEQUEUE and Display

```
/*
 * C Program to Implement Queue Data Structure using Linked List
 */
#include <stdio.h>
#include <stdlib.h>

struct node
{
    int info;
    struct node *ptr;
}*front, *rear, *temp, *front1;

int frontelement();
void enq(int data);
void deq();
void empty();
void display();
void create();
void queuesize();

int count = 0;

void main()
{
    int no, ch, e;

    printf("\n 1 - Enqueue");
    printf("\n 2 - Dequeue");
    printf("\n 3 - Front element");
    printf("\n 4 - Empty");
    printf("\n 5 - Exit");
    printf("\n 6 - Display");
    printf("\n 7 - Queue size");
    create();
    while (1)
    {
        printf("\n Enter choice : ");
        scanf("%d", &ch);
        switch (ch)
        {
            case 1:
                printf("Enter data : ");
                scanf("%d", &no);
                enq(no);
                break;
            case 2:
                deq();
                break;
            case 3:
                e = frontelement();
                if (e != 0)
                    printf("Front element : %d", e);
                else
                    printf("\n No front element in Queue as queue is empty");
                break;
            case 4:
                empty();
                break;
            case 5:
```

```

        exit(0);
    case 6:
        display();
        break;
    case 7:
        queuesize();
        break;
    default:
        printf("Wrong choice, Please enter correct choice ");
        break;
    }
}

/* Create an empty queue */
void create()
{
    front = rear = NULL;
}

/* Returns queue size */
void queuesize()
{
    printf("\n Queue size : %d", count);
}

/* Enqueueing the queue */
void enq(int data)
{
    if (rear == NULL)
    {
        rear = (struct node *)malloc(1*sizeof(struct node));
        rear->ptr = NULL;
        rear->info = data;
